

User Manual Lagalt

Navbar

A navbar is placed at the top of the application. From here it is possible to navigate to the home page by clicking “Lagalt” in the left corner. Profile page and create a new project are other shortcuts that are reachable from the navbar. Lastly, a “Login”- and “Logout”-button, depending if the user is logged in or logged out, are displayed in the navbar. These buttons are placed in the top right corner.

Home Page

<https://lagalt-2020.herokuapp.com>

This is the home page of the application. From here the user can see a list containing all available projects including the logged in user’s created projects and other users projects.

Project card

The projects have the following information on the cards: title, owner, industry, short description and what skills the project contains (tags). If the user matches a skill needed for a specific project, the skill tag will be filled in lime green color. The card will show “Your project” at the top right corner if the user owns that unique project.

Clickable cards

Every project card is clickable, which means the user can reach extended project information by clicking on the card.

Join a project and chat

Logged in users can join a project by clicking the “Join”-button. When clicked, a modal is displayed which demands the user to write a motivation with arguments why they want to join the project. Also, a check box is required to be filled, in which the user gives permission to the project admins to reach the user’s profile no matter the profile status. If the user has submitted the application, the “Join”-button will be changed to a “Applied”-button. Apart from the “Join”-button, if the user is already a member/owner of a project, a “Chat”-button will appear and substitute the “Join”-button.

Login Page

<https://lagalt-2020.herokuapp.com/login>

The login-page contains a sign in and sign up function and is used by a third party OAuth service. In this application Google is used as the OAuth service. In addition to signing up with a Google account, the user needs to come up with a username.

Profile Page

<https://lagalt-2020.herokuapp.com/profile>

The user’s profile information is visible on this page. The following information can be found here: Username, name, email-address, description, image, skills, portfolio and current workspace.

Hidden/public

There is also a “hidden/public” function. The “hidden” mode is for users who want to hide profile information, but are still intended to collaborate in projects. If users are not afraid of showing data, they can turn the public mode on.

Edit profile

In addition, the user can edit their profile. This is worked by a modal, which shows up as the user clicks the “Edit”-button. The user can change the following information from the modal: name, skills, status and description.

New Project Page

<https://lagalt-2020.herokuapp.com/project/create>

As the user can join a project, it also has to be possible to create a project. The user has to fill in the project name, select industry and tags as well as a fitting description for the project. When finished, a pop-up window will show up informing: “Project created successfully!”.

Project Page

<https://lagalt-2020.herokuapp.com/project/:username/:projectName>

The project page is where a unique project is shown, depending on the username and project id. Regardless if the user is a member of the project or not, the user can receive information such as project name, information about industry, project description, image, skills needed, project updates, progress and a members list. Members get additional information such as project resources.

Edit, Chat and Join

Depending on if the user is an admin, member or non-member of the project, suitable buttons will be displayed (“Edit” and “Chat” for admins, “Chat” for members or “Join” for non-members). If pressed “Edit”, the admin can manipulate industry, tags and description of the project from a modal.

Chat Page

<https://lagalt-2020.herokuapp.com/project/:username//:projectName//chat>

A chat will appear if the user has clicked on the “Chat”-button. The purpose of this function is to be able to communicate effectively among the project members. It is only available for project members to reach the chat page.
